

Operating manual High-pressure cleaners

quadro 399 TST quadro 499 TST

- USA -

Read and conform safety instructions before use! Keep instructions in a safe place for later use and pass them on to any future user.

#### Technical data

Tarkainal		
Technical data	quadro 399 TST	quadro 499 TST
Operating pressure, steplessly adjustable	10 - 1600 psi	10 - 1900 psi
max. permissible overpressure	1800 psi	2100 psi
Water output  *1 at nominal pressure	1.7 Gpm	1.9 Gpm
Nozzle size (Flat jet) (Dirt killer)	2503 030	2503 030
Volume	030	030
Water tank	1,8 G	1,8 G
Inlet water temp. to water tank	max. 140 °C	max. 140 °C
Max. temp. for direct suction	140 °C	140 °C
Direct suction height	98 inch	98 inch
Hose drum	yes	yes
High pressure hose	590 inch	590 inch
Electrical ratings	115 V/60 Hz, 15 A	115 V/60 Hz, 20 A
Motor speed adjust.	1700 rpm	1700 rpm
Connect.wattage Inp. Output	P1: 1.6 kW P2: 1.5 HP	P1: 2.3 kW P2: 2.0 HP
Weight (incl. access. with empty water tank)	99 lbs	99 lbs
Dimensions incl. handle L x W x H in inch	23 x 14 x 33,5	23 x 14 x 33,5
Sound level acc. to DIN 45 635 (reg. working place)	84 dB (A)	84 dB (A)
with dirtkiller Guaranteed sound level L <sub>wa</sub>	89 dB (A) 88 dB (A)	89 dB (A) 88 dB (A)
Vibrations at lance	2,0 m/s <sup>2</sup>	2,0 m/s <sup>2</sup>
Recoil at lance	approx. 20 N	approx. 20 N

<sup>\*1)</sup> Min. water quantity to be supplied to the high pressure cleaner! (2-8 bar admission pressure)

<sup>\*2</sup> Direct suction is possible through by-passing of water tank! (see page 13)

#### Dear customer

We would like to congratulate you on your new high pressure cleaner with integrated water tank and to thank you for the purchase.

To ease your introduction to the use of the cleaner, we have provided the following pages of explanations, tips and hints, which we ask you to read before using it for the first time.

The equipment will assist you professionally in all cleaning tasks, e.g.:

facades

- vehicles of all types

- barrels and containers

- flagstones

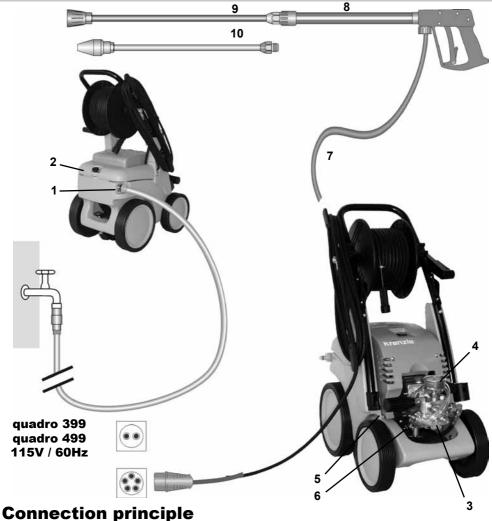

Contents

- stables

- channels

- terraces - machines etc.

Inspection report	42

The KRÄNZLE quadro 399 and 499 - high pressure cleaners are mobile machines

with hose drum and 590 inch industrial hose.

The connection principle can be seen from the illustration.

#### **Components**

- 1 Water inlet connection with filter
- 2 Cover for water tank
- 3 High pressure pump
- 4 Press. gauge with glycerin filling
- 5 Unloader valve safety valve
- 6 Detergent valve
- 7 High pressure hose
- 8 Spray gun
- 9 Interchangeable lance with flat jet nozzle and nozzle protection
- 10 Interchangeable lance with dirtkiller

#### Water supply system

The water must be lead to the high pressure cleaner under pressure (2-8 bar ad-mission pressure). A float valve regulates the water inlet. Then, the water is sucked by the high pressure pump from the water tank and supplied to the lance under the set pressure. The high pressure jet is formed by the nozzle at the end of the lance.

#### **Detergent and caring system**

The high pressure pump can also suck a detergent/caring agent and mix it with the high pressure jet. The additive is sucked through the pump and brought in with the set pressure.

Insert the detergent hose into the detergent container and open the detergent valve (6). The detergent must have the ph-value 7-9 neutral.

The detergent discharges with the water at the high pressure nozzle.

Only open the dosing valve, if the chemistry sieve is placed in a liquid. Sucked air leads to destruction of the pump seals !!! The rules concerning the environment, refuse and ground water protection must be complied with!

#### Lance with spray gun

The machine can only be operated when the safety trigger is squeezed.

When the lever is squeezed, the spray gun opens. The liquid is then pumped to the nozzle. The spray pressure increases and quickly reaches the selected operating pressure. For the deairing of the system open and close the gun quickly a few times. When the trigger is released, the trigger gun closes and any further spraying of liquid from the lance is stopped and the pressure gauge must show 0 bar.

The increase in pressure when the trigger gun is closed causes the unloader valve-safety valve to open. The pump remains switched on and continues to pump liquid through the pump at reduced pressure. When the spray gun is opened, the unloader valve - safety valve closes and the pump ressumes spraying from the lance with the selected operating pressure.

The spray gun is a safety device. Repairs should only be performed by qualified persons. Should replacement parts be required, use only components authorized by the manufacturer.

#### High pressure hose and spraying device

The high pressure hose and spraying device supplied with the machine are made of high grade material. They are also optimized for the machine and marked as required by the appropriate regulations.

If replacement parts are required, only such parts that are authorized by the manufacturer and which bear the markings required by the appropriate regulations may be used. The high pressure hose and spraying device must be connected in a pressure-tight manner. The high pressure hose may not be driven over, pulled excessively or twisted. Hose lines are wear parts. Guarantee is accepted only for manufacturing errors, not for external damages.

High pressure hose lines and spraying equipment must not be repaired, but replaced by a new hose or spraying equipment.

#### **Unloader valve - safety valve**

The unloader valve - safety valve protects the machine from a build up of excess pressure, and is designed not to permit an excess pressure to be selected for operation. The limit nut on the handle is sealed with a spray coating.

The operating pressure and spray rate can be steplessly adjusted by turning the handle.

Replacements, repairs, new adjustments and sealing should only be performed by qualified persons.

Take care that all screw connections are pressure-tight. A leakage of gun, high-pressure hose or hose drum has to be repaired at once. Leakages lead to an increased wear and to a possible malfunction of the delayed motor cut-out.

#### Operator's task:

Prior to each usage of this liquid spraying device, the operator is obliged to check if all safety relevant parts are in perfect working condition. (e.g. safty valves, high-pressure hose, cables and connections, spraying devices, etc.)

#### **Delayed motor cut-out**

Frequent, work-necessitated switching on and off of motors on machines of this size puts a heavy load on the power network and causes increased wear on internal electrical parts. Therefore the motor of the new KRANZLE device only switches off 30 seconds after closing the gun and then goes to stand still. By opening the gun, the device is started again.

#### Safety cut-out

If the device is accidentally not turned off after use or the pistol is not used for 20 minutes, the device automatically goes into the safety state via deactivating. By operating the main switch again, the device is activated again.

Replacements and inspection work should only be performed by qualified persons when the machine is disconnected from the power supply, i.e. the plug pulled out from the electrical socket.

#### **Setting up**

#### Location

Neither set up and operate the machine in rooms where there is a risk of fire or explosion nor put it into puddles. Do not use the machine under water. The device must not stand in the spray area of the high pressure jet.

#### **CAUTION!**

Never suck in liquid containing solvents such as paint thinners, petrol, oil or similar liquid matter. **Pay attention to the instructions of the manufacturers of the cleaning agents.** The seals in the machine are not resistant to solvents! The spray of solvents is inflammable, explosive and poisonous.

#### **CAUTION!**

When running your high pressure cleaner with hot water of 60° C raised temperatures occur. **Do not touch the machine without safety gloves!** 

quadro 399 quadro 499 115V / 60Hz

#### **Electrical connection**

The machine is supplied with an electrical power cord with plug.

The mains plug must be fitted to a standard grounded socket with a **30mA** residual current operated device. The socket must be protected with a **16A delay** action fuse on the mains side.

#### KRÄNZLE quadro 399 TST, 499 TST = 115 Volt / 60 Hz

When using an extension cable, this must have a grounded lead which is properly connected to the socket. The conductors in the extension cable must have a minimum cross section of 1.5 mm². Plug connections must be of a spray-proof design and may not be located on a wet floor.

#### **CAUTION!**

The use of extension cables which are too long may lead to malfunctions and start up difficulty. If the extension cable is longer than 10 m it must have a minimum cross section of 2.5mm<sup>2</sup>.

When using a cable drum, always keep the cable unwound as far as possible.

#### **Brake**

Brake applied

#### **Brief operating instructions:**

- 1. Connect high pressure hose with spray gun.
- 2. Connect to suitable water supply.
- 3. Connect current (see page 8).
- 4. Switch on machine, operate gun and start cleaning.
- 5. After having completed the cleaning process, put main switch in zero position and by opening the gun, reduce the pressure in the high pressure hose.

Then, the high pressure hose can be rolled up.

- Only use clean water ! Protect from frost !

#### **CAUTION!**

Please pay attention to the regulations of your waterworks company.

Due to the water tank, the device can be connected to any drinking water line without any difficulties.

### This is what you've purchased:

1. Dirtkiller

Lance with nozzle protection and high pressure nozzle Flat jet 25°

2. Spray gun M2000 with insulated handle and screw connection

3. KRÄNZLE - High pressure cleaners quadro 399 - 499 TST with hose drum and 590 inch HP hose NW 6 with steel reinforcement

7. water filter

6. Collapsible crank for hose drum (already installed)

# Preparation for use

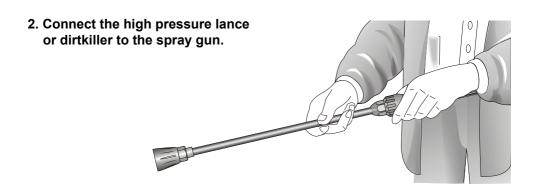

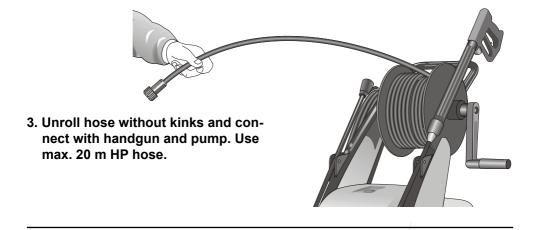

1. Check oil level.

The oil level must be between the two markings on the oil dipstick.

# Preparation for use

#### Preparation for use

5. The machine must be connected to the water line with cold water or up to 60° C warm water (see page 2).

The hose cross section must be at least 3/4" = 16 mm (free passage). Filter 1 must always be clean.

Please make sure that the filter is clean before using your high pressure cleaner.

#### **CAUTION!**

When running your high pressure cleaner with hot water of 60° C raised temperatures occur.

Do not touch the pump without safety gloves!

#### **External suction**

Undercarriage

If water is to be sucked from an external container for the high pressure cleaner, the connection hose between the high pressure pump and the water tank must be screwed off and the suction hose must be connected

Undercarriage

via a double nipple 3/4" (Order no.: 46.004) to the connection hose.

Make sure that the water is clean. Use the Kränzle suction hose with suction filter. (Order no. 15.038 3)

Maximum suction height 2.5 m, maximum water temperature for direct suction: 60°C (see technical data on page 2)

### To shut down the pump

#### **Suction of detergents**

Put chemistry sieve number 5 into the detergent container. Open the detergent valve (6), then the detergent is sucked in. When closing the detergent valve, the chemistry supply is automatically closed. Allow detergent to act and then wash off. (see page 5).

Note that you must always comply with the instructions provided by the manufacturer of the detergent (e.g. safety clothing) and the water protection regulations!

Only open the valve, if the chemistry sieve is in a liquid. Sucked in air leads to the destruction of the pump seals !!!

Damages to the pump caused by sucked in air

are not covered by the guarantee.

#### To shut down the pump:

- 1. Switch off the machine. Switch to "0" position.
- 2. Cut off the water supply.
- 3. Open the spray gun briefly until the pressure is released.
- 4. Apply the safety catch on the spray gun.
- 5. Remove the water hose and spray gun.
- 6. Pull the plug from the socket.
- 7. Winter: store the pump in rooms above 0°C.
- 8. Clean the water filter.

#### Frost protection

Normally after operation, there is still some water in the device. Thus, you must take special measures to protect the device from frost.

#### - Completely drain the device

For this purpose, separate the device from the water supply. Then, turn on the main switch and open the gun. Now, the pump presses the remaining water out of the water tank and the pump. However, do not allow the device to operate without water for longer than one minute.

#### - Fill the device with antifreeze agent

If the device is not operated for longer periods, especially over the winter, you should pump an antifreeze agent through the device. For this purpose, fill the antifreeze agent into the water box and turn on the device. Wait with opened gun, until the agent spurts out of the nozzle.

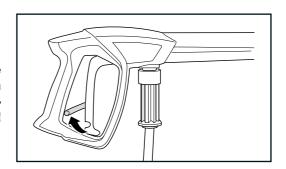

However, the best way to protect the device from frost is to store it at a frost-free location.

# Safety notes

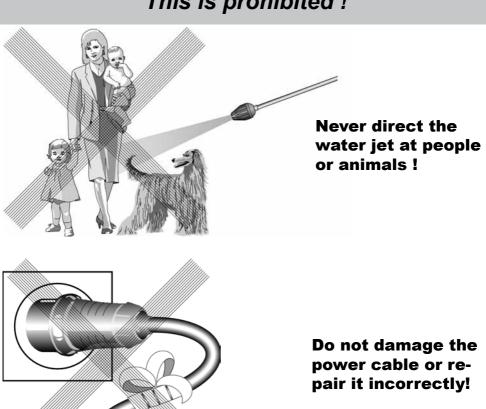

As to the recoil - see notice on page 2!

Apply the safety catch on the spray gun after each use, in order to prevent unintentional spraying!

# This is prohibited!

Never pull the high pressure hose if it has formed kinks or "nooses"! **Never pull the hose** over sharp edges!

# This is prohibited!

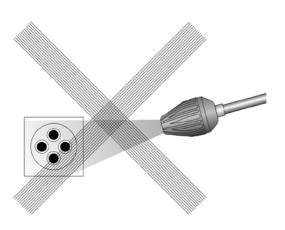

Never allow children to use the high pressure cleaner!

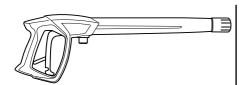

Never direct the water jet at the machine itself!

Never direct the water jet at a power socket!

# Additional accessories for ...

(on demand)

Rotary scrubbing brush Order No. 41.050 1

# Drain and pipe cleaning hose

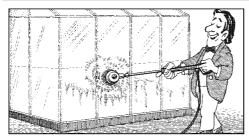

10 m - Order No. 41.058.1 15 m - Order No. 41.058

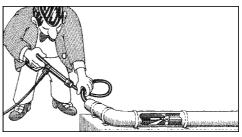

Environmental, refuse disposal and water protection regulations must be observed when using the accessories!

# ... further combination possibilities

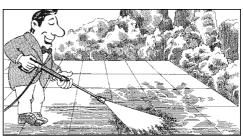

Car cleaning, glass, caravan, boat etc.: rotary washing brush with 40 cm extension and ST 30 nipple M22  $\,$  x 1.5

Cleaning pipes, channels and drains: pipe cleaning hose with KN nozzle and ST 30 nipple M22 x 1.5

Cleaning cars and all smooth surfaces: brush with ST 30 nipple M22 x 1.5

Rotary point sprayer for extreme soiling: Turbokiller with 40 cm extension and ST 30 nipple M22 x 1.5

# Small repairs

# The nozzle is blocked!

• No water but the gauge shows full pressure!

#### ...do it yourself!

# Nozzle dirty or sticky!

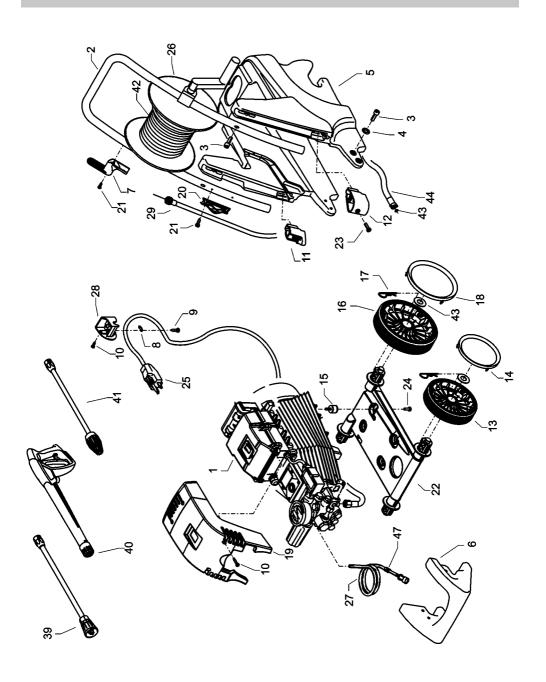

- Pressure gauge does not show full pressure
   The high-pressure hose vibrates.
- Water comes out in spurts.

valve screw

If you do not use the high-pressure cleaner for some time the valves can stick.

#### Warranty

#### Guarantee

The guarantee is only valid for material and manufacturing errors. Wearing does not fall within this gurantee.

The instructions in our operating manual must be complied with. The operating instructions form part of the guarantee. The Guarantee is void if other parts are used than genuine Kränzle accessory parts or genuine Kränzle spare parts.

For high-pressure cleaners sold to the user the guarantee period is 24 month.

For high-pressure cleaners sold for industrial use the guarantee period is 12 month. In the case of a guarantee please contact your dealer or authorized seller delivering accessories and your purchase receipt. You can find them in the internet under <a href="https://www.kraenzle.com">www.kraenzle.com</a>.

The guarantee is also void if the machine is used with exceeding the temperature and speed limits, a voltage below the required rating, with less than the required amount of water or with dirty water. Pressure gauge, nozzle, valves, sleeves, high pressure hose and spray equipment are wear parts and are not covered by the warranty.

#### General rules

#### Inspections

The machine must be inspected according to the "Guidelines for Liquid Spray Devices" at least once every 12 months by a qualified person, to ensure that continued safe operation is guarateed.

The results of the inspection are to be recorded in writing. (see pages 48-49)

#### **Accident prevention**

The machine is designed for accidents to be impossible if used correctly. The operator is to be notified of the risk of injury from hot machine parts and the high pressure water jet. The "Guidelines for Liquid Spray Devices" must be complied with. (see pages 16 - 17).

Check the oil level at the oil dip stick prior to each use (see also page 11). (Ensure horizontal position!)

#### Oil change:

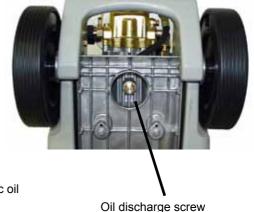

The first oil change should be carried out after approximately 50 operating hours, then every year or after 1000 operating hours. If the oil turns grey or white, you must change the oil of your high pressure pump in any case.

Place the device over a collection resevoir and open the oil discharge screw at the bottom.

Ensure a horizontal position to drain the oil completely. The oil is to be caught in the reservoir and disposed of in an approved manner.

New oil: 0.35 I

Motor oil: Castrol 10 W-60 SAE halfsynthetic oil

40

#### **High-pressure-cleaners** Hochdruckreiniger

Nettoveurs À Haute Pression

I. Kränzle GmbH Elpke 97 . 33605 Bielefeld

### **EC** declaration of conformity

We hereby declare, that the high-pressure models: Kränzle guadro 399 - 499 TST

(techn. documentation available from): Manfred Bauer, Fa. Josef Kränzle

Rudolf-Diesel-Str. 20, 89257 Illertissen

Nominal flow Kränzle quadro 399 TST: 102 Gph

Kränzle quadro 499 TST: 119 Gph

comply with the following guidelines and Machine guideline 2006/42/EEC specifications and their amendments for Specification for electromagnetic high-pressure cleaners:

compatibility 2004/108/EEC

Outdoor noise directive 2005/88/EC, Art. 13, High-pressure water jet machines

Appendix 3, part B, chapter 27

Sound power level

measured: quaranteed: 86 dB (A) 88 dB (A)

Applied conformity evaluation procedures

Annex V, noise directive 2005/88/EC

Applied specifications and

standards:

EN 60 335-2-79 :2009 EN 55 014-1 :2006

EN 55 014-2 / A2:2008 EN 61 000-3-2 :2006

EN 61 000-3-3 :2008

Bielefeld, den 11.12.2012
