

HydroKem™ APC All-Purpose High Pressure Cleaner

DESCRIPTION: HydroKem™ APC is specially formulated to provide a high foaming detergent safe to use on most surfaces. Proprietary surfactant blends and other enhancers provide a highly active detergent without the harsh corrosives associated with other high pressure detergent cleaners.

CHARACTERISTICS: HydroKem™ APC is green in color with a pleasant green-apple fragrance when mixed. Our two part system allows for more surfactants to be incorporated in the final concentrate than competitive single powder products .

HydroKem™ APC dissolves completely in five gallons of water. While not required, a superior product will result from mixing with soft water. The mixed product remains stable and once mixed into solution will require no additional mixing. Our formula, when properly mixed will not clog chemical injectors or nozzles. HydroKem™ APC rinses freely without leaving residue behind.

INSTRUCTIONS: Fill a five gallon bucket half full of water and add the entire contents of the pail pack to the bucket - both the powder and the liquid components. Continue filling the five gallon pail the lowest ring on the outside of the pail. Using a mixing paddle stir continuously until the contents of the pail are clear and no powder can be seen on the bottom of the bucket (usually about two-minutes).

APPLICATION: Dilutions will vary depending on surface to be cleaned. Typically a ratio of 15:1 will yield best results. Heavier soil may require using at 5:1 or 10:1. Results improve when applied with hot water.

We recommend testing in an inconspicuous area for color fastness. DO NOT allow the cleaner to dry on the surface. Apply detergent from the bottom up to minimize waste and allow for the most dwell time. When washing do so from the bottom up and then rinse from the top down.
